

ROBLOX BUSINESS · JUSTIN & HUNTER · FOR EVERY CLAUDE SESSION

The Game Factory

v2.0 Claude operating manual — one flow from four paragraphs to a dressed, MCP-tested, list-ready slice. Grok is optional shadow crew. Grok never blocks Claude.

This file replaces the split between v1.3 (speed), v1.4 (swarm / two-pass), and v1.5 (look) for anyone running a Claude session. Those addenda were right and they fought each other in a context window. Load this. If this file fights ROBLOX_SUCCESS_LOGIC.md on safety, children, money, or publishing, the doctrine wins. If it fights v1.2 on speed, silence, or dressing, this file wins.

What "best game, fast" is allowed to mean

Same day: a stranger can finish earn → spend → progress in a place that looks like the genre, MCP four-beat green, persistence survives restart, icon/thumb readable at 200px, listed or list-ready. Next morning: D1. Not same day: evergreen proof, DevEx, ads. Claude does not wait for Grok. Claude does not rip a place and reskin it. Claude does not call Cube output "the look."

PART 0 · WHO DOES WHAT

Claude is the factory. Grok is optional. Humans click the irreversible.

v1.3 named the jobs and left Grok and Claude sharing sentences. That is how a session stalls: "wait for Grok's confusion pass." v2.0 makes every Grok job a parallel bonus. If the Grok tab is dark, Claude does a 10-minute self-pass on that job and continues. The one-writer rule does not change: only Claude writes src/ and the live Studio DataModel.

ROLE	OWNS	NEVER
Justin	Name + four paragraphs. Move the cut line (2 min). G2 numbers. G4 thumb. G5 list / paid products / ads / kill. Unlisted publish + API access, once per title.	Fill forms. Invent mechanics. Write Luau. Babysit remotes.
Hunter	Gate A: three fresh kids, verbatim script. Fun-check is Justin's ten minutes beside that.	Be the test subject for a title he helped design.
Claude (this session)	Intake, ledger, tracker, teardowns, cut, build, lighting rig, Store shelf, Cube props, MCP four-beat, persist, evidence, STATE.md, session-close.	Open Open Cloud. Create paid products. Write while a second agent is in Studio. Start title two mid-build.
Grok (if the tab is open)	Extra teardowns 4–5, confusion pass, art sheets, thumb prompt variants, clip-hook / wedge critique, X discourse if already paid.	src/, Studio, repo commits, blocking the next wave.

PART 1 · SETTLED ANSWERS (DO NOT RE-LITIGATE)

Three owner questions, locked so a future session cannot reopen them

1. Copy a game 100% then reskin? No.

A ripped place is slower (you throw away the engine and spend Pass 2 scrubbing IP), more fragile (you inherit their wall and their fading wave), and it is how titles get deleted after they finally have metrics. Audio is fingerprinted. Owned names come down on sight. Extraction tooling risks the account. Do two-pass: Pass 1 traces the public loop onto your engine with Store stand-ins. Pass 2, prepared in parallel, snaps on new names, blended style, one complaint-wedge clip hook, your sim numbers.

2. Will MCP / Cube make it look like the #1s? No. Do not ask them to.

MCP is a hand in Studio. Cube / Assistant is a prop shop: short prompt or reference image, bounding box, triangle cap. Over-detailing the prompt makes Cube worse. The look is 80% Store volume + lighting rig, 15% three to five hero objects, 5% icon/thumb from an image tool. Default lighting is why generated places look generated.

3. Marketable in one day? Dressed experiment, not a proven business.

Claude may claim same-day only if the four-beat is green, the look-bar passes, and the place is list-ready. D1 is tomorrow. Ads are after D1. Hobby DevEx is a real win. \$10k/month from publish one is not a plan.

PART 2 · THE ONE FLOW

Six waves. Claude runs the left column. Grok may fill the right. Nothing on the right is a gate.

If a title is already Active (Fat Man Gets Rich), do not open Wave 0 on a new slug. Jump to Part 8 and close that title's holes. Hopping is the failure the doctrine named.

WAVE	CLAUDE MUST (GATE)	GROK MAY (NEVER BLOCKS)	HUMAN
0 Kick 0:00–0:15	Slug it. Draft brief.md from the four paragraphs. Query ledger. Open owned paths. STATE.md = Wave 1.	—	Name + four paragraphs. Silence 20 min on the draft brief = accept.
1 Swarm 0:15–1:15	Tracker: 5 live comps by CCU. Teardowns 1–3 on TEMPLATE.md. Wedge.md from complaints. theme.md five lines. shelf.md ≥12 Store IDs + 4 audio IDs. economy.md + sim Candidate. lighting.md numbers.	Teardowns 4–5. Confusion preview. Art-sheet for the hero. Thumb-formula variants.	None.
2 Cut 1:15–1:35	cut-list.md. Line drawn. Pass 1 vs Pass 2 named. Parking list. Two hypotheses in the brief.	"Which IN item loses a ten-year-old?" If absent, Claude self-passes in 8 min.	2 min to move the line. Silence = keep it. G2 silence 20 min = Candidate economy.
3 Build 1:35–6:00	Pass 1 pack on the engine: one verb, teach-the-sink, one return hook, onboarding artifact, instrumentation. Hooks R1–R7. No second verb.	Pass 2 names, clip copy, thumb prompts, MCP script critique — written to disk, not src/.	None. Unlisted+API if not yet done — three clicks, blocks honest persist.
4 Dress + prove 6:00–8:30	Insert shelf by ID, recolor to spec, apply lighting rig, one hero collectable, look-bar checks, MCP four-beat, persist 7-row.	Extra thumb candidates. Confusion on the spawn screenshot.	G4 on icon/thumb. Silence 30 min = ship the pair.
5 Packet 8:30–9:30	List-ready checklist. Gate A script printed. Evidence stubs. STATE.md next move. Session-close.	Launch copy / clip hook lines.	G5 to list. No ads tonight.

Fan-in rule: a Wave 1 hole (one teardown missing) does not stall the cut. Three filled templates are enough. Ten is stalling. Cap live subagents at six. Each agent owns one path; Claude-as-conductor is the only merger. Two writers on one file is a failed wave.

File contracts — Claude writes these, nobody else

PATH	WAVE	STOP CONDITION
games/<slug>/brief.md	0	Six questions drafted from prose. Two hypotheses. Ledger dump appended.
research/<slug>/ccu-board.md	1	5 titles, CCU, wave stage, verb family.
research/patterns/<slug>-<comp>.md ×3	1	TEMPLATE.md complete through COPY / DO NOT COPY.
games/<slug>/wedge.md	1	One clip/social hook the comps lack. Not a second verb.
games/<slug>/theme.md + shelf.md + lighting.md	1	Five lines. ≥12 model IDs. Lighting numbers. 4 audio IDs.
games/<slug>/economy.md	1	Ladder shape + Candidate numbers + sim result.
games/<slug>/cut-list.md	2	Line drawn. Pass 1 / Pass 2 / PARKED.
games/<slug> pack .luau	3	Loop boots. R1–R7 clean.
docs/runs/YYYY-MM-DD-<slug>-mcp.md	4	Four beats + persist + four screenshots + one kid-confusion note.
docs/runs/STATE.md + session-close	5	Next move one line. What changed. Evidence IDs.

PART 3 · PASS 1 / PASS 2

Trace the machine on the engine. Snap uniqueness on after the loop is green.

PASS 1 — CLAUDE BUILDS TONIGHT	PASS 2 — PREPARED IN WAVE 1, SNAPPED IN WAVE 4
One verb and its cadence.	Theme names for the same upgrades — never their SKU names.
How the bag / plot / hive teaches the sink in the first minute.	Five-line style + Store shelf recolored to it.
One return hook. Numbers from our sim, not theirs.	Clip / social surface from wedge.md.
Generic Store stand-ins so MCP has something to look at.	Hero collectable that reads at 200px.
Onboarding artifact. Instrumentation: earn, sink, upgrade, session length.	Icon 512 ² + thumb 1920×1080 from an image tool, formula locked.
R1–R7 green.	Parked: zones, trading, gifts, rare variants — after Gate B.

Copy matrix, short enough to refuse a bad step: trace verbs, cadence, first 60s, HUD density, colour logic, appointment rhythm, price-ladder shape, thumbnail formula, tracker stats. Never take meshes, textures, animations, scripts, audio files, names, mascots, logos, private endpoints, or a one-source visual clone. If a step needs another creator's file, the step is wrong — search the Store by silhouette or generate in-style.

PART 4 · LOOK BAR — CLAUDE'S GRAPHICS JOB

Dress the slice so a kid stays. Do not open an art department.

Kids compare readability, not triangle counts. A 200px tile, then a first minute. If the collectable has no name, the sink is not a building, four HUD numbers compete, and lighting is Studio default, they leave. Cube will not save that.

JOB	CLAUDE DOES	NOT THIS
Volume (80%)	Toolbox by silhouette. Insert by ID. Recolor every insert to the two-colour spec. Hide style fighters.	Cube a unique tree twelve times. Search Store by another game's name and paste the pack.
Light (still 80%)	Paste lighting.md: Realistic/Future on a small slice, ClockTime for mood, Atmosphere haze, ColorCorrection contrast +0.1–0.2 and sat slightly up, Bloom on gold/event only, warm PointLight on the destination.	Leave default Lighting. This is why MCP places look like MCP places.
Hero (15%)	One reference sheet (3/4, clean ground, spec colours). Cube short prompt or image-to-mesh + triangle cap, or Meshy/Tripo remeshed ≤15k. Third regenerate = primitives + paint.	A paragraph-long Cube prompt. A ripped mesh. PBR on background rocks.
Destination	One Store vault/building as mass. Facade painted to spec. Must be readable from spawn.	A unique cathedral. Kids need a silhouette to walk toward.

JOB	CLAUDE DOES	NOT THIS
Icon + thumb (5%)	Write the prompt from the formula. Generate in Imagine / Ideogram / Recraft. 512 ² and 1920×1080. Readable at 200px.	A Studio screenshot. MCP cannot draw the face that wins the click. Grok may add variants; Claude ships one pair.
Audio	Store licensed library. Pickup, bank, one loop, one event sting. IDs in the pack.	"Free" audio named after another game.

Cube standing orders: prompt short; image or text not both; select a Part as bounding box; set max tris so faceted is the style; generate the ornament, build the boxy body with primitives; accept ~75%. Triangle budgets: props 1–8k, hero ≤15k, building ≤20k (import cap 20k).

Look-bar checklist — run before MCP, not after

CHECK	PASS
200px icon / hero	Collectable is nameable at phone-arm length.
Spawn shot	Destination building is pointable without a speech.
Meter	Exactly one filling number.
Palette	Two colours + ground. Third only on the event.
Set dressing	No adjacent Store packs from different styles.
Light	Default lighting gone. Destination brightest thing that is not the event.
IP	R6 treated as a Phase-1 block. No owned names or mascots.

PART 5 · MCP FOUR-BEAT — DEFINITION OF BUILT

A compiling pack is not a game. A green run log is.

Requires the unlisted place with Studio API access on. Without Justin's three clicks, InsertService and DataStores are dark and the test lies. Claude prepares the checklist and waits. Claude does not publish.

BEAT	CLAUDE VIA STUDIO MCP	PASS
1. Join	Start play. Screenshot spawn. Read console.	No error spam. Player can move. First action or onboarding is obvious.
2. First earn	Drive the verb until a number goes up.	Within 60 simulated seconds. Screenshot the meter.
3. First spend / bank	Walk to the destination or shop. Complete the sink.	Server-side balance change. Client cannot edit it (R1).
4. Upgrade + persist	Buy first named tier. Stop play. Start play.	Upgrade and currency survived. Not a memory store.

Write docs/runs/YYYY-MM-DD-<slug>-mcp.md every time: commands, console excerpts, four screenshots, pass/fail per beat, one sentence a kid would still not understand. Red beat = patch in the same wave. Do not open Wave 5 on a red beat. Do not hand Justin a "built" slice with a red beat.

PART 6 · CLAUDE PROGRAM SURFACE

What Justin can say, and what the session treats as done

JUSTIN SAYS	CLAUDE RUNS	DONE
"New game: [name]. [four paragraphs]."	Waves 0–2. Stop with the line drawn.	brief + board + 3 teardowns + cut-list in front of him
"Keep the line. Build."	Wave 3 Pass 1.	Pack boots. R1–R7 clean.
"Make it look like the top games."	Wave 4 dress + look-bar. Thumb prompts fired.	Look-bar green. G4 pair waiting.
"Test it."	MCP four-beat + persist.	Green run log or a patch list
"List it."	Packet only.	Checklist. He clicks G5.
"Kill it / keep it."	Closeout + evidence + engine candidates.	Next title can start smarter
"Run the swarm on Fat Man Gets Rich."	Part 8, not a new slug.	Shelf wired, MCP green, Gate A unblocked

Learning still only means files the next session is forced to read. SessionStart already loads CLAUDE.md and STATE.md — add the active brief, cut-list, last MCP log. Every title carries 1–2 hypotheses specific enough to be wrong. The ledger has no

veto. n=1 seeds expansion. n=2 may become a default. Write session-close before you stop even if the hook is not installed yet.

PART 7 · PASTE INTO CLAUDE.md

One block. Do not replace the safety block. Safety still sits above this.

CLAUDE FACTORY MODE v2.0

- 1. Four paragraphs in → draft brief.md, query ledger, start Wave 1. Do not ask him to fill a form.
- 2. Pull 5 live comps by CCU. Fill three TEMPLATE.md teardowns yourself. Blend three sources. Never one-source clone. Never rip a place to reskin it.
- 3. Auto-cut to the budget. Draw the line. Name Pass 1 vs Pass 2. Park the rest. Wait two minutes. Then build.
- 4. You are the only writer to src/ and Studio. Grok jobs are optional disk files. If Grok is dark, self-pass in ten minutes and continue. Do not wait.
- 5. Pass 1 = traced loop on our engine with Store stand-ins. Pass 2 snaps on after the loop is green.
- 6. Look = style spec + Store volume + lighting rig + one hero + image-tool thumb. Cube is a prop shop. Default lighting is a fail.
- 7. You are not done when code compiles. You are done when look-bar passes and MCP four-beat + persist are green.
- 8. Silence proceeds on reversible work. Listing, paid products, ads, title-kills, rule-lowering wait forever.
- 9. One active title. New ideas go in IDEA_LOG.md. Closeout before the next slug.
- 10. If this fights the doctrine on safety, children, money, or publishing, the doctrine wins.

PART 8 · ACTIVE TITLE OVERRIDE

Fat Man Gets Rich is mid-pipe. The factory's first proof is this title, not a new one.

A session that opens Pocket Factory while this slug is Active is the anti-pattern with better typography. Point every agent at the holes that already exist.

CLAUDE JOB, TODAY	OUTPUT
Confirm STATE.md slug = fat-man-gets-rich. Refuse a second slug.	STATE.md next-move is Wave 4-equivalent, not Wave 0.
Refresh the three-comp board (Mine a Mountain, Bee Swarm, Grow a Garden) — numbers only, 20 min.	research/fmgr/ccu-board.md dated today
Re-run Candidate C through the sim. One page.	economy.md ready for G2 if not already approved
Wait on Justin's three clicks if the place is not yet unlisted-with-API.	Checklist from docs/runs/PERSISTENCE_TEST.md. Do not fake persist.
Wire already-stocked Store IDs + named tiers + flood timer into theme.luau / world.luau.	Shelf renders. Flood is the light source.
Apply lighting.md. Recolor inserts to gold-on-dark. Hero coin pile must read at 200px.	Look-bar green on spawn / bank / meter shots
MCP four-beat + persist 7-row. Write the run log.	Green, or a patch list in the same session
Print Gate A script for Hunter. Do not invent a walkthrough that hides whether the bag teaches the bank.	Hunter can run three fresh kids

Grok on the active title, if the tab is open

Confusion pass on the three MCP screenshots: what would lose a ten-year-old. Two extra thumb prompts. One clip-hook line for the flood. Delivered as files. Claude does not pause the persist test for them.

PART 9 · MONEY AND SILENCE, UNCHANGED

Speed serves retention. Silence is not a G5.

STAGE	WORKING MEANS	MONEY
Wave 4 green	Loop + look-bar + persist	Zero
Gate A, 3 fresh kids	2 of 3 say the goal, act in 60s, want a second go	Zero. Patch until they can.

STAGE	WORKING MEANS	MONEY
Night-zero list (G5 click)	New-experience impressions start	Zero. Watch first-session completion.
D1 next day	Doctrine floor ~12%+. Under 8–10% after three hook rewrites: kill with closeout.	Still zero. This number decides energy.
D1 clears	Favourites up, a few organic buys, stable	Then shorts, then \$20–200 micro-creators, then small tiles on the winning icon only.

Silence proceeds: brief draft, G1 pick, cut-line, Candidate economy, thumbnail pair, research, evidence, evidence-justified cap moves. Silence never proceeds: listing, paid products, ads, killing a live title, lowering a safety rule, spending money. Every product still maps to accelerate fun / show status / complete a collection / participate socially, or it does not ship.

PART 10 · WHAT CLAUDE SHOULD BUILD IN THE REPO NEXT

Only wiring that makes this manual executable. No v2.1 until a stranger has played.

#	FILE	WHY
1	This manual at roblox-pipeline/docs/FACTORY_PLAN.md (replace the split addenda as the session-facing file). v1.2 remains the constitution behind it.	One file in SessionStart.
2	Paste Part 7 into CLAUDE.md under the safety block.	The session cannot forget the flow.
3	skills/: same-day-slice, conductor, look-bar, mcp-four-beat, legal-copy, pass-1-trace, pass-2-unique, session-close.	Triggers match Justin's phrases.
4	Templates: TEMPLATE.md, cut-list, lighting.md, mcp run-log, closeout.	A swarm without forms writes essays.
5	Then: unlisted publish, shelf wire, MCP, Gate A on Fat Man Gets Rich.	The test of the factory is a game.

The test of v2.0

A dressed loop in front of a stranger, MCP-green, listed or list-ready. Claude can get there without Grok. Grok can only make the cut and the thumb sharper if the tab is open. Do not add agents that produce more documents about the factory. Run Part 8.

Compiled from FACTORY_PLAN v1.2 · Same-Day Slice v1.3 · Parallel Swarm v1.4 · Look Bar v1.5 · ROBLOX_SUCCESS_LOGIC.md · PIPELINE.md · Assistant /generate_mesh docs (image ref, bounding box, triangle cap) · Lighting / Atmosphere / post-process docs · thumbnail spec 512² / 1920×1080 · owner's instructions 12 Sep 2026: one-day slice, parallel agents, no 100% rip, graphics that compete, Claude-operable except Grok's optional jobs.
